

GREENLIGHT

OpusTM

Air Cushion System

- Quality British Manufacturing
- Superior Environmental Performance
- Pack Cost Reduction

Greenlight promotes environmentally sustainable and cost-effective packaging that helps companies pack more, using less.

Designed and manufactured in the UK for over 25 years, Opus™ inflatable packaging systems produce air cushions in some of the world's most demanding warehouses.

Opus™ cushions are produced from a proprietary film blend that delivers high-level impact and puncture resistance, as well as market-leading low costs per cubic metre.

Using high-performance polymers containing a minimum of 50% recycled content, Greenlight will protect your products, your budget and the environment.

Pack More, Using Less

GREENLIGHT

OpusTM

Air Cushion System

“For our customers, it’s a priority to minimise their plastic consumption and reduce pack costs. Greenlight helps them achieve exactly that, with competitive pricing and 50% recycled films.”

Network Packaging, UK

Opus Machine Specifications

Speed	Up to 17 m/min 80 cushions/min (200x200)
Throughput	11 cubic metres/h
Electrical Supply	100-240 V Single Phase
Dimensions	36 cm x 30 cm x 28 cm
Weight	8.5 kg

Q&A

• What makes Greenlight cushions so strong?

We use a proprietary blend of co-extruded film designed to maximise optimum puncture resistance and elasticity. Independent tests conducted by Brunel University demonstrated the cushions could resist a static force of 70 kg.

• How much single-use, virgin plastic can be eliminated by using Greenlight cushions?

By promoting the use of recycled materials, superior film blends and latest system technology, we have helped companies reduce the amount of single-use plastics they use by as much as 65%.

• Do you guarantee your recycled content?

We understand that a lot of grand claims are made by some suppliers. Our films have been independently certified by SCS to contain the minimum stated quantity of recycled content.

• Does Greenlight offer hopper systems?

We design and build a range of customised material handling systems for high-volume packaging lines as well as “plug and play” units for lower-volume users.
